Maximum Match 100%
Listing first 45 summaries
 Minimum DB seq length: 0
Maximum DB seq length: 200000000
 Run on:
 OM protein -
 Total number of hits satisfying chosen parameters:
 Searched:
 Scoring table:
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
 Score

 surface of a replicable display package, synthesising oligopeptides derived from the target protein on a solid phase, and testing for binding between the peptide and oligopeptides. The method is used to screen large peptide libraries, especially to detect antibodies, or their fragments, that bind to cell markers or that can differentiate between different forms of the same protein, including bispecific antibodies that bind to epitopes on the same monometric antigen or two epitopes on different molecules. The genes/oligonucleotides that encode selected peptides can be isolated and used for recombinant production of antibodies. Selected antibodies are used, e.g. for immunohistochemical or
 Y33183 standard;
 Sequence
 Synthetic oligopeptides W60537-61 are derived from the extracellular domain of CD64. They were synthesised on 25 polyethylene rods as adjacent, non-overlapping sets. Peptide specific phages were isolated by affinity binding to the CD64-covered rods. The specification describes a method for the identification of a peptide able to bind specifically to a target protein. The method comprises displaying the peptide on the surface of a renlicable displaying the peptide on the

 reduce IgG- or IgE-mediated tissue damage, e.g. IgG- or IgE-mediated hypersensitivity, recruitment of inflammatory cells or release of inflammatory modulators. The therapeutic compositions can also be used to treat disease in animals. The knowledge of the 3-D structure of Fc-gamma compounds that regulate immune function and inflammation in an animal, including humans (i.e. structure based drug design). For example, chemical compounds can be designed to block binding of immunoglobulin to an Fc receptor protein using various computer programs and models. The products of the invention have anti-inflammatory and immunoprotective activity. This sequence represents the human sFC-gammaRI protein fragment described in the method of the invention.

 receptor consist only of the extracellular portion of the receptor and are not glycosylated i.e. they do not have transmembrane domains or signal peptides. The recombinant proteins may be used in immunoassays to determine the immune status of patients with chronic diseases of the immune system, e.g. AIDS, systemic lupus erythematosus (SLE), multiple myeloma (MM), or rheumatoid arthritis. In addition, pharmaceutical compositions containing recombinant proteins may be used to treat or prevent autoimmune diseases, allergies or tumours, especially AIDS, prevent autoimmune diseases, allergies or tumours, especially AIDS,
 The present sequence is the human high affinity FC receptor, FCgammaRI. FCgammaRI is also known as CD64. FC receptors play an important role in defending the body against infections. First, pathogens are opsonised by serum immunoglobulins. The resulting complex then binds to cells expressing FC receptors. FCgammaRI molecules are expressed by monocytes and macrophages, but expression can also be induced on neutrophils and eosinophils. Upon FC receptor activation, immune effector pathways are activated, leading to immune response. The present sequence may be modified to produce recombinant versions. The recombinant FC

N-PSDB; A50592.

Isolated nucleic acid molecule encoding the CD19 cell surface antigen, useful for immunodiagnosis and immunotherapy of immune-mediated infections or disorders, e.g. asthma, immune-complex disease, parasitic diseases.

Example 10; Column 53-55; 75pp; English.

The present sequence is that of a human macrophage specific FCRI, as deduced from CDNA clone pl35 (see A50592), which was isolated from a CDNA library expressed in, COS cells using a novel method of the invention designed to isolate CSA nucleic acids: The method is CB based upon transient expression of a CSA in eukaryotic cells and CC physical selection of cells expressing the antigen by adhesion to CC (panning on) an antibody-coated substrate such as a culture dish. CC (coanning on) an antibody-coated substrate such as a culture dish. CC (coanning on) an applications, including the invention, and the CC proteins they encode, are useful for immunodiagnostic and coated infections, including the diagnostic and coated infections, including the diagnostis and coated infections, including the diagnostis and coated infections, include asthma, including humans. These disorders include asthma, coated on the cell surfaces of macrophages. The CC infection of the coated on the cell surfaces of macrophages. The CC surfaces other than macrophages, is useful in therapy. A fusion CC protein of FCRI and a receptor ligand will be helpful to increase xxx.

 -RAY CRYSTALLOGRAPHY (2.3 ANGSTROMS)
 SUBUNIT: TETRAMER OF TWO ALPHA AND TWO BETA CHAINS.
MISCELLANEOUS: SUCCINYL-COA SYNTHETASE (SCS) OF E.COLI CATALYZES
ITS REACTION VIA THREE STEPS THAT INVOLVE PHOSPHORYL ENZYME AND
 ENZYME REGULATION: EXHIBITS TWO INTERESTING PROPERTIES: "SUBSTRAY SYNERGISM", IN WHICH THE ENZYME IS MOST ACTIVE FOR THE CATALYSIS OF ITS PARTIAL REACTIONS ONLY WHEN ALL THE SUBSTRATE SINDING SITUARE OCCUPIED, AND "CATALYTIC COOPERATIVITY" BETWEEN ALTERNATING ACTIVE SITES IN THE TETRAMER, WHEREBY THE INTERACTION OF SUBSTRATES (PARTICULARLY ATP) AT ONE SITE IS NEEDED TO PROMOTE
 MISCELLANEOUS: THE BETA-SUBUNIT CONTAINS THE ATTACHMENT SITES F
SUCCINATE. THE COMPLETE ACTIVE SITE IS PROBABLY LOCATED IN THE
REGION OF ALPHA- BETA CONTACT.
SIMILARITY: TO OTHER BETA SUBUNITS OF SUCCINYL-COA SYNTHETASES.
 SUBSTRATE-LEVEL PHOSPHORYLATION. IT CAN ALSO FUNCTION IN THE OTHER DIRECTION FOR ANABOLIC PURPOSES, AND THIS MAY BE PARTICULARLY IMPORTANT FOR PROVIDING SUCCINYL-COA DURING ANAEROBIC
 ENZYME-BOUND SUCCINYL PHOSPHATE AS INTERMEDIATES.
MISCELLANEOUS: DURING AEROBIC METABOLLSM IT FUNCTIONS IN THE
CITRIC ACID CYCLE, COUPLING THE HYDROLYSIS OF SUCCINYL-COA TO
SYNTHESIS OF ATP & THUS REPRESENTS AN IMPORTANT SITE OF
 European Bioinformatics Institute.
 GROWTH WHEN THE OXIDATIVE ROUTE
 CATALYSIS AT THE OTHER.

 v81213) were isolated using a rapid immunoselection cloning method from a cDNA library expressed in COS cells. The cDNA library was constructed from polyA RNA of cells from a single patient undergoing extreorporeal interleukin-2 induction therapy. DNA sequence analysis revealed that the cDNAs encoded therapy. DNA sequence analysis revealed that the cDNAs encoded type I integral membrane proteins with 3 extracellular immunoglobulin domains. The invention provides a novel method for cloning cDNAs from mammalian expression libraries. This is based on the control of the con
 and molecular cloning of any protein which can be expressed and transported to the cell surface membrane of a eukaryotic cell. CD40 cDNA (see V81198) is specifically claimed.
 This polypeptide human Fc receptor I (FcRI). FcRI cDNAs (see V81213) were isolated using a rapid immunoselection cloning
 transient expression of an antigen in eukaryotic cells and physica selection of cells expressing the antigen by adhesion to an antibody coated substrate. The method is useful for the isolation

 surface of a replicable display package, synthesising oligopeptides derived from the target protein on a solid phase, and testing for binding between the peptide and oligopeptides. The method is used to screen large that bind to cell markers or that can differentiate between different froms of the same protein, including bispecific antibodies that bind to epitopes on the same protein, including bispecific antibodies that bind to epitopes on different molecules. The genes/oligonucleotides that encode selected peptides can be isolated and used for recombinant production of immunofluorescent analysis, and also to detect cell transformation caused by manufactured in contractions.

 Misc-difference
 The amino acid sequence (R91439) of human FCRI was detd. from a cDNA clone, p98 (T14718), obtd. from a cDNA library using an immunoselection cloning method. FCRI is a high affinity receptor for the Fc portion of IgG, normally located on cell surfaces of macrophages. 2 Other cDNA clones, p135 (T14717) and p90 (T14719), of the p98 product is truncated compared with those of the p135 and p90 products (see also R91438 and W00859). A fusion protein of FCRI and a receptor ligand will be helpful in increasing the potency of antibodies in therapy.

 cDNA clone, p90 (714719), obtd. from a cDNA library using an immunoselection cloning method. FCRI is a high affinity receptor for the FC portion of IgG, normally located on cell surfaces of macrophages. Other cDNA clones (see also T14717-18) coded for variants (R91438-39) of the FCRI sequence. A fusion protein of FCRI and a receptor ligand will be helpful in increasing the potency of antibodies in therapy.
 The amino acid sequence (W00859) of human FCRI was detd. CDNA clone, p90 (T14719), obtd. from a cDNA library using

RESULT W80448

This is the amino acid sequence of human Fc receptor I (FCRI), and deduced from cDNA clone pi35 (see V63456) isolated using a rapid immunoselection cloning method from a cDNA library expressed in cells. The cDNA library was constructed from polyA RNA of cells from a single patient undergoing extracorporeal interleukin-2

 This polypeptide human Fc receptor I (FCRI). FCRI cDNAs (see W81213) were isolated using a rapid immunoselection cloning method from a cDNA library expressed in COS cells. The cDNA library was constructed from polyA RNA of cells from a single patient undergoing extrcorporeal interleukin-2 induction therapy. DNA sequence analysis revealed that the cDNAs encoded type I integral membrane proteins with 3 extracellular immunoglobulin domains. The invention provides a novel method for cloning cDNAs from mammalian expression libraries. This is based on transient expression of an antigen in eukaryotic cells and physical selection of cells expressing the antigen by adhesion to an antibody-coated substrate. The method is useful for the isolation and antibody-coated substrate. The method is useful for the isolation

 Scoring table:
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
